

Peach Twig Borer, First Generation

If you had moderate to severe PTB damage last year, use the earlier spray date; if you had very little PTB damage last year, use the later date to start sprays. (These two dates correspond to 300 and 360 degree days after biofix, or 5% and 16% egg hatch.) End of egg hatch, where you should “keep fruit protected up to” is at 800 degree days.

County	Location	Start Date (lots of injury last year)	Start Date (little injury last yr)	Keep Fruit Protected Up To:
