

## Peach Twig Borer, First Generation

If you had moderate to severe PTB damage last year, use the earlier spray date; if you had very little PTB damage last year, use the later date to start sprays. (These two dates correspond to 300 and 360 degree days after biofix, or 5% and 16% egg hatch.) End of egg hatch, where you should “keep fruit protected up to” is at 800 degree days.

| County            | Location                | Start Date<br>(high injury last year) | Start Date<br>(little injury last yr) | Keep Fruit<br>Protected Up To: |
