

Peach Twig Borer, First and Second Generations

If you had moderate to severe PTB damage last year, use the earlier spray date; if you had very little PTB damage last year, use the later date to start sprays. (These two dates correspond to 300 and 360 degree days after biofix, or 5% and 16% egg hatch.) End of egg hatch, where you should “keep fruit protected up to” is at 800 degree days.

Locations that are “not yet known” means we have not established a biofix for those sites.

County	Location	Start Date (high injury last year)	Start Date (little injury last yr)	Keep Fruit Protected Up To:	2nd Gen. Start Spray Dates
