

## Codling Moth Spray Timing Information, Second and Third Generations

Starting at the beginning of the second generation egg hatch, codling moth larvae can potentially enter fruit throughout the second and third generations, with very little “gap” in between. With this in mind, we recommended applying treatments at regular intervals (depending on the insecticide you are using) to protect fruit up to September 15. Or at the bare minimum, keep fruit protected during the “period of greatest egg hatch” for each generation.
