

Peach Twig Borer, First and Second Generations

- The “Start Spray Date” is a range. Apply your spray based on the injury level at your site for the prior year. In high injury areas, start at the earlier date. In low injury areas, spray at the later date.
- Typically, only one application is needed in the *first* generation.
- The date under the column that says “Keep Fruit Protected Up To” represents the end of egg hatch. Between the date in this column, and the date in the “Start Spray Date Range” for Second Generation, there is no need to apply an insecticide for PTB.
- For the second generation, apply two cover sprays where damage was bad last year (starting at the earlier date). Otherwise, for locations with minimal damage, apply one cover spray at the later date in that range.
