

Codling Moth Spray Timing Information, Second and Third Generations

Starting with the beginning of egg hatch for Second generation, fruit on apples and pears should be protected continuously, as codling moth larvae can potentially enter untreated fruit continuously. Apply treatments at regular intervals (depending on the insecticide you are using) to protect fruit up to September 15.

County	Location	Second Generation			Third Gen.
		Egg Hatch Begins	Period of Greatest Egg Hatch	Egg Hatch Ends	Egg Hatch Begins
Box Elder	Perry	July 10	July 20 - August 4	August 17	NOTE: The start of the egg hatch for the third generation ranges from zero to four days after the end of second generation egg hatch. This is why we recommend continuous protection starting at the beginning of second generation egg hatch until harvest or Sept. 15, whichever is earlier.
